

The *MicroBug* by WB9LPU

Features of the MicroBug –

- Semi-automatic double-lever mechanism
- All springing done with rare-earth permanent magnets
- All critical adjustments fitted with locks and steel spring washers for stable settings
- Constructed from C360 brass, lacquer coated for durable finish
- Tiny, but heavy enough to stay put while keying
- Speed continuously adjustable with thumbwheel mechanism below the paddles
- Speed range set with auxiliary weight. Typical range 7 to 25 wpm
- Magnetic reed switch for “dit” contact.
- “Voting circuit” locks out stray bounces
- Can also be used as an iambic paddle
- World’s smallest bug?
